

The Iris Next Generation Range Extender

Dear Valued Iris Customer,

We believe you are using a first generation Range Extender in conjunction with your Iris system and compatible devices. Our data suggests that while functioning, these first generation models may not be meeting our high expectations in particular home environments or with certain devices. As a thank you for being a loyal Iris customer and with the goal of bettering the performance of your system, we've included in this package a brand new, next generation Range Extender at no charge to you. This next generation product improves the range of your Iris network to reach further across your home and will automatically optimize your Iris network when you pair it with Iris.

You may keep operating both generation Range Extenders, but we recommend pairing the new Range Extender as soon as possible for better performance. Just like all of your devices, login to the Iris website (www.lowes.com/iris) and follow the on-screen instructions for pairing your new Range Extender. If you have any questions regarding the setup or pairing of the Range Extender, just call us at 1.866.469.4747.

Be sure to check www.lowes.com/iris for all the latest devices we are adding to Iris, such as First Alert Smoke and CO Detectors, Sylvania LED Light Bulbs, a Verizon Cellular Modem to keep your hub online even when your broadband Internet drops offline, an Iris Outdoor Camera, and even an Iris Garage Door Controller (Coming soon!).

Thank you again for being one of our loyal customers and continuing to use Iris to manage and control your home.

The Iris Team
